EDUCATION

University of Central Florida
Bachelor of Science in Computer Science

Orlando, FL
Aug. 2020 – Dec. 2025

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C/C++, PowerShell, SQL
Backend & Frameworks: Spring Boot, Node.js, Express.js, FastAPI, React.js, REST APIs, AWS Lambda, Microservices, Unit Testing, Integration Testing
Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, CI/CD Pipelines
Databases: PostgreSQL, MongoDB
Tools: Git, IntelliJ, VS Code, Eclipse, Ubuntu, PgAdmin
Concepts: OOP, Distributed Systems, Data Structures, Algorithms, Design Patterns, Java Multithreading, Scalable Applications, SDLC, Agile/Scrum, System Reliability, Observability, Automated Testing, Root Cause Analysis

EXPERIENCE

- Application Security Intern, Cyber Threat Management Team** May 2025 – Aug 2025
American International Group (AIG) *Jersey City, NJ*
- Developed enterprise automation solutions in Python and PowerShell to support identity governance workflows, processing and validating account lifecycle data across distributed Active Directory environments while improving operational efficiency and reliability.
 - Designed and implemented scalable Python automation pipelines to process large security datasets, transforming raw data into actionable insights while reducing manual analysis effort by 90% and improving operational visibility.
 - Engineered auditing and monitoring workflows to identify stale Active Directory objects and inconsistent account states across global environments supporting 100k+ enterprise identities, enabling proactive issue detection and remediation.
- Software Development Engineer Intern** May 2024 – Aug 2024
Amazon *Herndon, VA*
- Developed and maintained scalable backend services and RESTful APIs using Java, TypeScript, and Node.js within distributed cloud architectures, translating business requirements into reliable software solutions supporting real-time customer engagement workflows.
 - Built and maintained microservice-oriented backend systems with a focus on scalability, observability, telemetry, service reliability, and operational performance in a serverless cloud environment.
 - Collaborated across Agile engineering teams to conduct code reviews, debug distributed systems, improve CI/CD pipelines, support automated testing initiatives, and drive continuous software delivery improvements.
- Teaching Assistant** Aug 2023 – May 2025
University of Central Florida *Orlando, FL*
- Provided technical guidance and mentorship to 100+ students on computer architecture, concurrency, and systems programming concepts while strengthening problem-solving and software engineering practices.

PROJECTS

- Project Mercury** | *PostgreSQL, AWS, Python, PGAdmin, CI/CD Pipelines* Jan 2025 - April 2025
- Owned the design and implementation of an automated backend data pipeline using Python, AWS, and PostgreSQL to process large-scale audit logs, improve data observability, and support scalable analytics workflows.
- KnightLint** | *React, TypeScript, FastAPI, Python, Google Gemini API, GitHub API, Railway* October 2025
- Developed an AI-powered code review platform using React, TypeScript, FastAPI, GitHub APIs, and Google Gemini to automate AI-driven pull request analysis, improve code quality, identify security risks, and accelerate development workflows through generative AI integration.
 - Implemented automated code analysis and recommendation workflows leveraging AI models to improve developer productivity, debugging efficiency, and code maintainability.
- Xplora** | *MERN stack (MongoDB, Express.js, React, Node.js), AWS, JavaScript, TypeScript* Aug 2024 - Dec 2024
- Built and deployed a scalable full-stack travel planning platform using the MERN stack and AWS, implementing REST APIs, cloud infrastructure, and reliable data management practices to support dynamic user workflows.
